

## A B S T R A C T

## A PRINTED CIRCUIT CARD CONNECTOR

5           The invention relates to a printed circuit card  
connector comprising a housing (2) having a first bearing  
portion (8) integral with the housing and rigidly  
connected to the housing so as to bear against a first  
face of the card, the connector being characterized in  
10 that it includes a second bearing portion (13) integral  
with the housing for bearing against a second face of the  
card, the second bearing portion being resiliently  
connected to the housing in such a manner as to enable  
the bearing portions to move relative to each other in a  
15 bearing direction, the bearing portions (8) being spaced  
apart at rest by a distance (d) that is less than the  
theoretical minimum thickness of the card.
